

## Laser Ligher

Due to its round, small form, the lighter is very practical and handy – for the use of lighting candles or to light up cigarettes.

With its refined technic and the ignator botton on the side, the ignition mechanism is easy and can be done from all angles.

The laser flame is windsafe and therefore ideal for outside use. The gas container can be opened through a light turn upon which it can be filled. There are various colour combinations of the lighter depending on personal taste.

Materials:

- Metall, ceramic, rubber, plastic,

Characteristics:

- easy ignition mechanism, which can be ignited from all angles

- Laser flame

Usage:

- For candles or to light cigarettes
